

The SPOT™ System At-a-Glance

SPOT is a full-featured access control and print management system to manage your patrons' devices and computers. SPOT will help you collect valuable network usage information, while improving staff and patron experiences.

ADVANTAGES:

- Enterprise-grade stability and scalability
- Not just print management, but total management
- Ability to enforce bandwidth limits
- Patrons use the OS-native printing UI, and all print job data remains securely within your network
- Works with your existing network and printers
- Seamless interoperability with our CASSIE system for managing your library's public computers

SPOT™ is the Total Solution

While other products offer a wireless or mobile printing solution, SPOT offers the total solution to managing your patrons' devices and computers when they are used on your network. With SPOT, you have the power to enforce limits so that each patron receives their fair share of your network resources. And best of all, your staff can do all of this from the same interface they use to manage your library's public computers.

Your patrons will be welcomed to your network with a customizable splash page, no matter which type of device or computer they use. You may include your usage policy, and may require valid credentials which are validated against your ILS system records.

SPOT offers network bandwidth control so that you can ensure that each patron gets fair access to your network resources. This means you will no longer have "Bit Torrent" downloads bringing down the entire Internet connection for everyone in the building. You may apply bandwidth control profiles based upon patron class or type, based upon information you specify in the ILS record.

SPOT™

SPOT offers print management that operates seamlessly with CASSIE's print management – jobs are claimed at the same station, using the same interface whether they originated from one of your library's public computers or from a patron's device. Printing from Windows, Mac OS, Linux, AndroidOS, iOS and ChromeOS is supported. All printing employs the native printing UI within each operating system. There are no confusing steps such as downloading and using printing "helper apps," or saving and then sending jobs via email or to a web page. All print job data remains securely within your network at all times. Virtually any printer with a Windows printer driver will work with SPOT's print management; there is no requirement for wireless capable, or Apple- or Google-approved printers.

SPOT will collect usage, printing and session statistics, all of which are easily queried in real-time in CSV or HTML format. SPOT will guard your network after hours based upon the operating hours you have defined.

SPOT is the total solution for managing and securing your network, allowing you to offer services to your patrons and their devices with confidence.

Request your fully-functional software evaluation and see how implementing SPOT can benefit your organization today.
